EPA is committed to working closely with response agencies and state and local officials to ensure the safety of citizens, respond to concerns and to evaluate impact to water contaminated by the Gold King Mine Release. EPA is sharing information as quickly as possible with the public as experts work to evaluate any effects the spill may have on drinking water, public health, agriculture, fish and wildlife.

Please see our website for the latest information: <http://www2.epa.gov/region8/gold-king-mine-release-emergency-response>

Regular updates will be posted as they are available.

**Subject:** Fwd: Brinco Water Introduction

Dear Ms. McCarthy, et al

I am writing this letter in regards to the various points along the Animas River last week, which increased the harmful levels of lead, arsenic, beryllium, cadmium and mercury that were extremely high compared with acceptable levels set by the EPA, which are technically called "maximum contaminant levels" or "action levels for treatment."

I am attaching information on our company and our ability to clean this water, coming from the Gold Creek Mine with a 100% guarantee that our system is fully designed to remove any and all contaminants, including all metals, Radon, Arsenic and all heavy metals not only from the mine, but also the Colorado River and anywhere there is a contamination input. We believe we can begin to accomplish this project in about 6-8 weeks as we do have equipment in operation in West Texas.

Please review this information, with references and contact me at your earliest convenience.

Regards

*Greg Winski*
